

Network Based Video Surveillance with Artificial Intelligence for Warehouse and Industrial Applications

- Video Surveillance stored on the camera for 30,60, 90 days
- Stored on the AWS Cloud for up to one year
- Uses AI for enhanced, speedy search
- Runs over your existing cabling, computer network, and internet
- IP cameras will just be an extension of your existing computer network and internet

Three S Concept

In today's world of warehouse and industrial operations, there is a specific need for overall command and control of the physical facility. This idea can be best broken down into the Three S Concept: Suitability, Safety and Security. Simply put, this concept allows for a stable workplace in the dynamic business world.

Suitability: Ensures that the network based application of camera utilization provides an overview of physical plant resulting in greater overall cost effectiveness of both day to day operations and modern facility organization.

Safety: Provides corporations with liability protections via enhanced coverage and strengthens safe working practices among warehouse and industry personnel.

Security: Enables both on site and remote control and access of facilities, resulting in better site management, loss control and better overall management of operation as a whole.

Overall Warehouse Management System

A network based camera system provided by S&G Communications incorporates the sound principles of

business management. This network, while running via your existing computer network, promotes site organization, workforce protection and improved labor management.

Our company can provide these network based systems as either an individually based camera system or as an integrated part of data utilization and coordinated plan of effective communications. Your existing cabling and computer network provides the foundation for these systems.
