## SCHOOL SAFETY PROMOTION

The Allworx VoIP phone system includes Emergency 911 monitoring that can notify assigned staff via desk phones, mobile devices, emails and text messages, when a 911 call is made. This notification identifies where the emergency call was initiated - down to the exact building and room number - helping to ensure that urgent news reaches the people best able to implement timely safety procedures.

We believe every school district should have a modern phone system designed to meet the needs and improve the safety of schools. - one that has rich features and can easily send 911 notifications to school administrators and safety personnel.

In order to assist schools financially with their telecom upgrade, Allworx will provide 15 free Allworx Verge 9304 phones for every 100 Allworx Verge phones purchased by a school district.

**An Education Technology Lunch & Learn on VoIP Design Options for K-12 will be held on October 26, 2018 at the College of DuPage in Glen Ellyn.**

The event will include a presentation and discussion on hosted (cloud-based), managed, and premises-based VoIP and will provide an understanding of your options, the pros and cons of each option, and costs. Our engineers, several of whom are instructors at large local community colleges, will be on hand to answer your questions. This is a free event and a complimentary lunch will be served.

More information will be forthcoming, but you can sign up anytime by [clicking here](#) or sending an email to [info@nex-gen-services.com](mailto:info@nex-gen-services.com). Please include your name, school district, title, and number of persons attending.

## Hosted, Managed, or On-Premises - Which VoIP Phone System is Best for Your School?

VoIP is an acronym for Voice over Internet Protocol, today's standard in phone systems. Many schools are replacing their aging digital phone systems with VoIP. VoIP systems consist of a phone server and IP phones and typically run on the same network as your computers. In most implementations, the user's computer plugs into the back of their phone. In many cases, that shared infrastructure results in lower costs than traditional systems and VoIP systems offer more features and flexibility.

Today, VoIP is offered in three options: [Managed, Hosted or On-Premises](#) systems. To learn more sign up for our Lunch & Learn at the College of DuPage on October 26th.

### NexGen has Engineers to Help You

NexGen's engineers, several of whom are IT staff members at large educational facilities, can help you with all of your technology upgrades, supply you with multiple quotes, and provide all the information you need for your telecommunications and network upgrades.

NexGen is a telecom and network engineering firm specializing in advanced IP voice and data, cloud services, network analysis, network optimization, wireless, and structured cabling. We create customer solutions by designing, installing, and maintaining their systems. For more information, contact Jack Bush at 847-459-1220 or [jbush@sandgcom.com](mailto:jbush@sandgcom.com).

### NEXGEN IS AN E-RATE APPROVED VENDOR

Although VoIP telecommunications E-Rate benefits have expired, associated services, such as cabling and network services, are still covered. You can save considerably by bundling your cabling, networking, and telecommunication services. For more information, contact us at 847-459-1220 or [info@nex-gen-services.com](mailto:info@nex-gen-services.com).
